

**A report by the staff of the  
Public Utilities Commission of Ohio**

**Weekly Report of COVID-19 Impacts by Electric Transmission Zone**

**August 26, 2020**

The Public Utilities Commission of Ohio's (PUCO) Office of the Federal Energy Advocate is producing this special report due to a current COVID-19 pandemic event which is drastically affecting all facets of life in the USA. Specifically, this report analyzes the load differences for electric transmission zones that are entirely or partly in Ohio.

In order to properly evaluate load differences per year, staff removed weather effects from the data as well as aligning days to properly have weekdays only compared with other weekdays. Staff intends to continue a weekly analysis that captures every week since the COVID-19 pandemic was declared up to the week preceding the current week. In order to make a baseline for the weekly reports, staff continues the method of denoting the week of the year

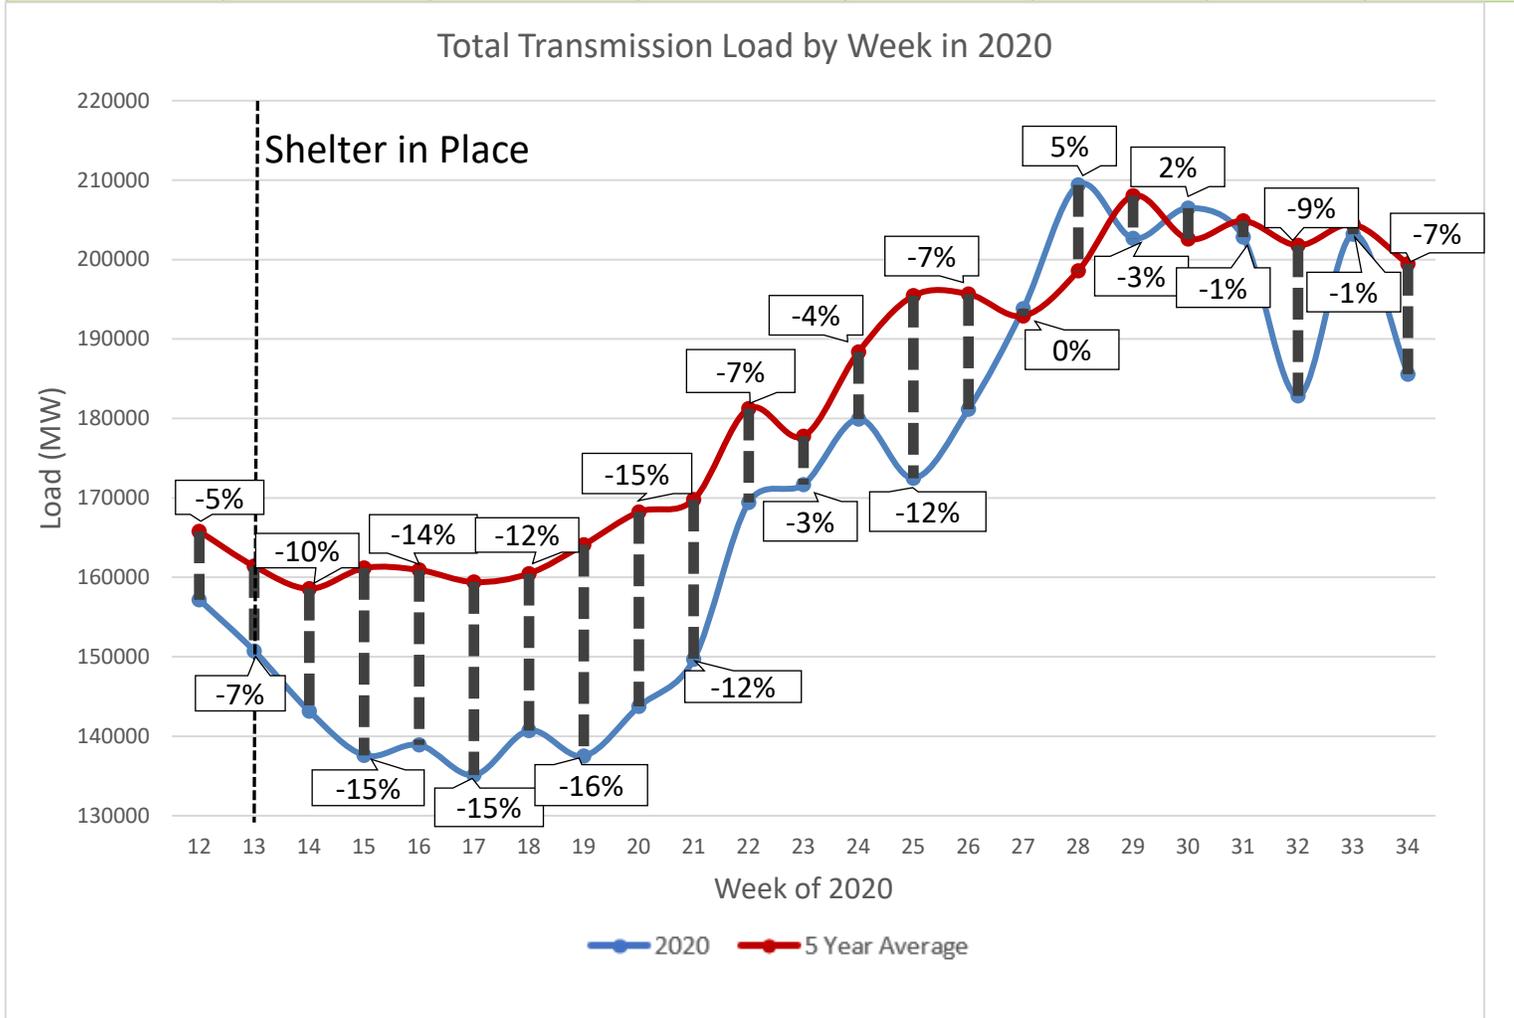

This weekly briefing report is for the 34<sup>th</sup> week (For 2020 that is August 16 - August 22). An analysis of this week demonstrates the impact of COVID-19 spread prevention tactics in energy consumption. The 33<sup>rd</sup> week the load reduction versus the five-year average was around -1 percent. **For the 34<sup>th</sup> week the reduction is around -7 percent.** The five-year average and 2020 total transmission loads are not statistically significant, however there appears to be some volatility that deserves continued monitoring.

Please see the graphs provided on the subsequent pages for further detail.
